Contents:

WHAT IS XMPP/JABBER?

XMPP (formerly known as Jabber) is an instant messaging system that allows CERN users to communicate with one another. XMPP also supports creating and joining chat rooms for group communication.

RECOMMENDED CLIENTS

For Linux/Windows users we recommend Pidgin. If you are using Mac OS, our choice is Adium. However, there are many other options, so feel free to check some other clients to choose the one you prefer. Also, in case you don't want to use a desktop client you can use our webclient, Jappix, which can be accessed in the URL <https://jabber.cern.ch/>

The Jappix project's website is <http://codingteam.net/project/jappix>
